

Week 7

Week-10 upcoming Test

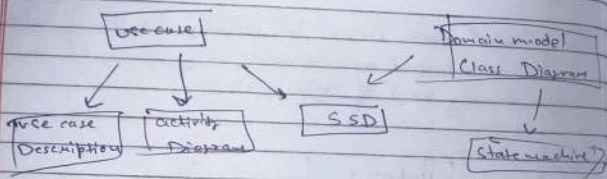

Take Things seriously ---- From now onwards

Page No. _____
Date: / / 2022

Mca which event should consider when Development consideration
→

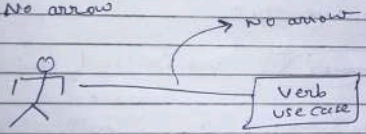

Week-5 use case Desc-Activity Sequence Diagram

use case → feature System can perform.
I Requirement Model

use case start with verbs → makesure using Model can.

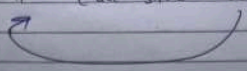

No arrow

include & exclude among use cases ---- dash line

FM → function can perform

variable → " can store variables

Side 28: CRUD Matrix.

CRUDs Not Model

use case / entity / domain / class	Customer	Account	Cash	adjustment
create customer	C	C		
look up customer	R	R		
product customer				
use Report	R	R	R	
Process acc adjust	R	U		R
update custom acc	up/archive	up/archive		C

forecast to find out missing any use case.
and identify which case missing. No

Q. How we find if any use case missing

if in column not all 4 CRUD operation mean

we are missing

use case

e.g. → adjustment

- Q. what is entity? - It is a thing that system need to maintain data about.
- In this system Data need to maintain about customer, account, balance, transaction, need to maintain Sale, order, Placed, about adjustment.

Project 1
Page No.
Date: / / 2020

Try to solve need data about

- Q. given CRUD Matrix are we missing any operation.
→ Yes we missing this entity & that identity have no 4 CRUD operation.

3. Modeling Data about Systems

If you develop system for two system work would be diff identity, diff Problem space -

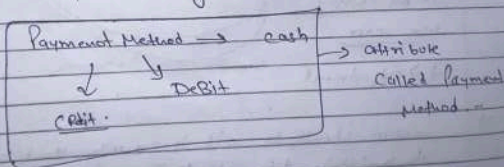

Every system trying to solve Problem -

The diff Identity perform that operation.

⇒ Hospital → Theme Park → water → Free or Tour Identity.

→

If something Describe using Diff piece of information identity

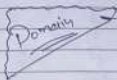

Some Paragraphs identify all the identities & attribute.

Class = Identity

each class's identity

System
analysis

Data
entitled

System identify

Brainstorming Technique

Novy Technique

Identity is always Noun not verb.

Mid-Term $\rightarrow$ 10th week.

$\rightarrow$ what attribute

" identity

" rel b/w Identity & attribute $\rightarrow$ analyst convert to Designer.

$\rightarrow$ Analyst convey Details in Model.

$\swarrow$ Two $\searrow$

identity

rel Diagram

Domain

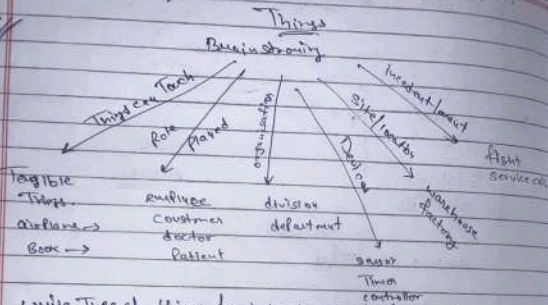

class Diagram

Domain is more from 19's old diagram.

How analyst know

- ① Brainstorming → analyst goes observe every thing about what identity involve to user perform.
- ② Noun technique.

v.v.impl

① write Type of things for linkout event for action
or

② amazon user as identity → Role Played.

#2 Noun Technique.

① what is agile method. ---? v.v.impl.

The Noun Technique.....

① is noun' identity -?

② what kind of noun be ignored.

identity & attribute

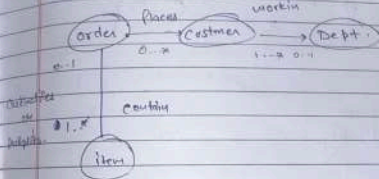

Week-6 Domain class.
Detail about Domain Class.

key $\rightarrow$ define instance of that class.

Mr Smith

Associations Amongst Objects

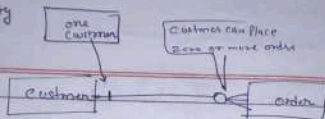

7. Title of Associations:-

- $\rightarrow$ **Unary** $\rightarrow$ a relationship involve one class or one entity
- $\rightarrow$ **Ternary** $\rightarrow$ Three class
- $\rightarrow$ **Binary** $\rightarrow$ Number of

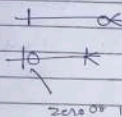

Entity-Relationship Diagram.

Entity

 (M)
 Class/Div

Chow foot
one or many

this order can have one or many items

look at each other
from cardinality

where item have one foot foot
order.

Semantic Next:

John

many

Sara

Slide 24

Entity Relationship Diagram

lifetime not in model.

3-03-2024

Domain Class Diagram

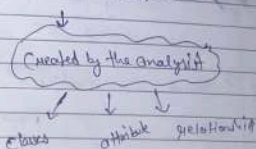

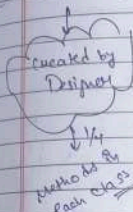

now Second Model

Domain class Diagram. It is to represent logical things, classes, attribute, identity & relationships.

Q. class vs Domain class

Ans. class is like Car, Student, table, classroom whereas Domain class is relative to particular Domain.

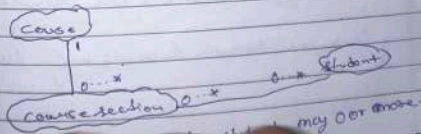

→ class Diagram vs Domain Class Diagram

Difference b/w Cardinalities on symbol - 3 Here Multiplicity.

Multiplicity way of telling via Symbols...

if further clarity - Does any of these relations info show, good

Slide 29

Relation have Cardinality (symbol $\{ \}$)

" " Multiplicity (number 0 - ∞)

Association need only when its multiplicity is many to many or many to many.

How from 1/1/2021
5:15 pm
05-02-2021

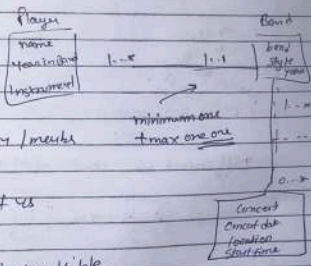

➔ Q. Can 1 kind of relationship be possible?

Slide 28

Slide 30

Slide 33

Band with members and Concerts

Can band have more than 1 member

→ yes

Can band play no concert yes

→ yes

Can band be play in multiple.

→ yes

Can Concert have no band

→ No at least one body should be there to perform

Can be have association & attribute of Association

Booking
date band
performance
order
base pay

Relationship Association

Slide 34

Generalization / Specialization Relationships

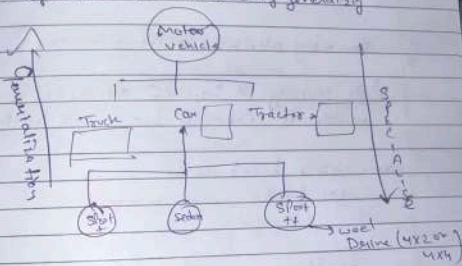

Inheritance Relationship

→ class can inherit other class.

Slide 35

The more we go deep

we specialize & look up we doing generalization

what motor vehicle generalization:

- VIN Number
- Manufacture
- Price

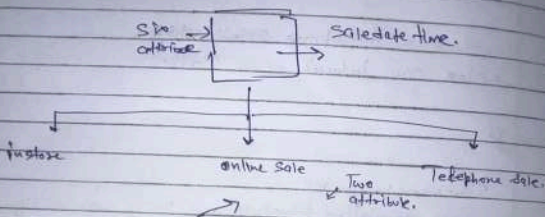

attributes gonna be special

→ Area of Software Development

↳ repetition is bad - - -

Slide 36!

Sale class :->

Q. How many attribute online store can have (2 pts only, + 4 is for)

→ So basically it have 6 from the attribute level which it inherits from sale date time.

Some classes filled some not ->

→ not fair to create instance

Creates instance

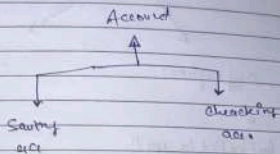

Inheritance from up class

→ inherited from abstract class -> which have instance
→ called complete class -> higher inheritance.

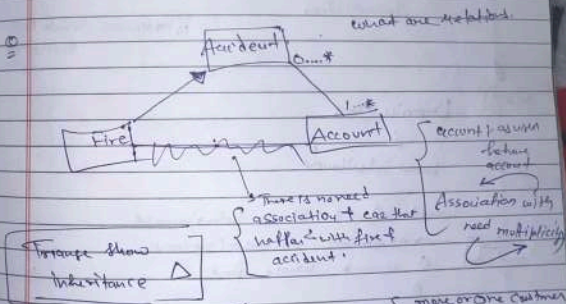

AT bottom always complete class, Abstract class always at top.

Q1 what if we have at bottom concrete class (Search)
 → complete class:- class we can create instance of.

Q2 do 3?
 complete

Q3 Draw a model with inheritance.

Triangle show inheritance

Fire with accident + acc

more or one customer of acc can have accident... can be the same accident

Side

Sailous
exam 12

Whole Part - relationship:

composites & its parts

Whole Part - relationship.

Aggregation

Composition

that part existed in itself
like mouse, keyboard

◇ (Diamond) shows
Aggregation

◆ (Composition)

biting can remove

if diamond (whole part
aggregation)

Side 41

Domain class

known inheritance

what ◇ → show inheritance

→ no symbol → association

◇ → whole part

(if dotted line not connected to any class) is the
then Association)
